

SUSPENSION TRAVEL

The amount a suspension travels up and down on a vehicle is based on a number of factors including

- Axle load
- Balance beam rotation
- Tire size
- Terrain the vehicle is travelling on
- Spring deflection

There are a number of different spring options available on Granning suspension from 3leaf 76mm to mono leaf 76mm and parabolic to multileaf. Suspension options to give smaller suspension travel and stiffer suspension response or suspensions to reduce wear and tear on a vehicle and give smoother ride are available.
